

## Vertiblade® 19-inch Vertical Mount Bracket System

The Vertiblade is a modular system of panels mounted on a flexible spine for mounting electronic equipment. It can be configured to accommodate many different sizes and types of equipment.

### Step One: Configuring the spine

A standard Vertiblade spine provides 6U mounting space. It can be configured with any combination of 1U, 2U, 3U and 4U - there are dozens of possible configurations! Ask us if you need more than 6U capacity.

### Step Two: Choosing your panels

There are multiple panel options which are installed hanging down between each hinged U position, e.g. between the colors in the diagram on the right. Choose the panel options which fit your needs from the options to the right:

### Step Three: Choosing your screw threads

The Vertiblade spine and panels come standard with M5 / SAE 10-32 screw thread adaptors. One pair of optional adapters for equipment with M4 or M6 captive fasteners ship with every Armarac.

Standard

- For top mounting equipment such as servers, storage systems, UPS.
- Includes integrated cable management system.

Short

- For top mounted or hanging equipment such as switches and routers.
- Provides easier cable access for large bundles from switches.

Multifit

- For installing rackmountable equipment from top and/or bottom.
- For mounting small non-rackmount components e.g. media converters, modems and PSU's.

Patch Panel & Fiber

- For mounting 6x 1U patch panels in only 2U of space.
- Built-in cable relief bars for all patch panels.
- Terminate up to 6x pairs of fiber in supplied enclosure.
