

Armarac® MZ-FIB-TNK

MX ACCESSORIES QUICK SPECS

Available for all MX Series armarac enclosures, the "Fiber Trunking" MZFIBTNK kit creates a designated conduit route for optical fibers within the armarac enclosure.

The two-piece kit provides both vertical and horizontal transportation paths for the ingress and egress of optical fibers to the armarac networking enclosure. Painted bright yellow, the trunking allows for multiple fibers and maintains all necessary bend radii to ensure networking standards compliance, whilst keeping the fibers safe from moving parts, Vertiblade latches and the power reticulation and grounding cabling.

Manufactured in the USA from local and imported components.
